

# PBD

As of December 31, 2011

## Fund Description

The PowerShares Global Clean Energy Portfolio is based on the WilderHill New Energy Global Innovation Index. The Fund will normally invest at least 90% of its total assets in securities that comprise the Index and American depository receipts based on the securities in the Index. The Index seeks to deliver capital appreciation and is composed of companies that focus on greener and generally renewable sources of energy and technologies facilitating cleaner energy. The modified equal-weighted portfolio is rebalanced and reconstituted quarterly.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commission apply. The Fund's return may not match the return of the Underlying Index. Concentrated industry investments involve greater risks than more diversified investments.

## Fund Data<sup>3</sup>

Market Price	-39.95	-12.08	-	-	-21.44

Performance data quoted represents past performance. As stated in the Fund's prospectus, the expense ratio of 0.75% is expressed as a unitary fee to cover expenses incurred in connection with managing the portfolio. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invescopowershares.com](http://invescopowershares.com) to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint between the highest bid and the lowest offer, as of the time that the Fund's NAV is calculated, generally around 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times.

## 3-Year Index Statistics<sup>1,3</sup>

	Performance (%)	Volatility (%)	Sharpe Ratio
WilderHill New Energy Global Innovation	-9.84	32.24	-0.31
S&P Global Clean Energy	-24.45	36.73	-0.68
MSCI World	11.13	20.43	0.55
S&P 500	14.12	18.97	0.75

securities lending were added to the performance shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The S&P Global Clean Energy Index, the MSCI World Index and the S&P 500<sup>®</sup> Index are unmanaged indexes considered representative of the global clean energy market, stocks of developed countries and the U.S. stock market, respectively.

Shares are not FDIC insured, may lose value and have no bank guarantee.

Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 75,000 Shares.

## Leading the Intelligent ETF Revolution®

Underlying Index performance does not represent Fund performance.

<sup>3</sup> The Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.

Volatility is the annualized standard deviation of index returns.

Beta is a measure of relative risk and the slope of regression.

Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance.

Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude.

Alpha is a measure of performance on a risk-adjusted basis.

Stock Price-to-Earnings Ratio is the share price divided by earnings per share. It is measured on a 12-month trailing basis.

Stock Price-to-Book-Value Ratio is the ratio of a stock's market price to a company's net asset value.

Weighted Harmonic Average is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones.

Weighted Average Return on Equity is net income divided by net worth.

Weighted Market Capitalization is the sum of each underlying securities' market value.

<sup>4</sup> Please see the website for complete holdings information. Holdings are subject to change.

<sup>5</sup> Security classifications used in calculating allocation tables are as of Nov. 30, 2011.

The Global Industry Classification Standard was developed by and is the exclusive property and a service mark of MSCI, Inc. and Standard & Poor's.

Foreign securities have additional risks, including exchange-rate changes, decreased market liquidity, political instability and taxation by foreign governments.

Investment in securities in emerging market countries involves risks not associated with investments in securities in developed countries.

The Fund may contain securities in the clean energy industry. Companies engaged in this industry are subject to greater risks, and are more greatly impacted by market volatility, than more diversified investments.

Investing in securities of small and medium-sized companies may involve greater risk than is customarily associated with investing in large companies.

The Fund is considered non-diversified and may be subject to greater risks than a diversified fund.

Securities lending involves a risk of loss because the borrower may fail to return the securities in a timely manner or at all. If a Fund is not able to recover the securities loaned, it may sell the collateral and purchase a replacement security in the market.

Lending securities entails a risk of loss to the Funds if and to the extent that the market value of the loaned securities increases and the collateral is not increased accordingly.
