PowerShares Dynamic Financial Sector Portfolio

As of March 31, 2012

Fund Description

The PowerShares Dynamic Financial Sector Portfolio is based on the Dynamic Financial Sector IntellidexSM. The Fund will normally invest at least 90% of its total assets in common stocks that comprise the Index. The Intellidex thoroughly evaluates companies based on a variety of investment merit criteria, including price momentum, earnings momentum, quality, management action, and value. The Underlying Intellidex is comprised of stocks of 60 U.S. financial services companies. These are companies that are principally engaged in the business of providing services and products, including banking, investment services, insurance and real estate finance services.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index. Concentrated industry investments involve greater risks than more diversified investments.

About risk

The Fund may contain securities in the financial services sector. Companies engaged in this sector are subject to greater risks, and are more greatly impacted by market volatility, than more diversified investments. Investments focused in a particular industry are subject to greater risk, and are more greatly impacted by market volatility than more diversified investments. Investing in securities of small and medium-sized companies may involve greater risk than is customarily associated with investing in large companies.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to

which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Harmonic Average** is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted Market Capitalization** is the sum of each underlying securities' market value.
