Fund Description

The PowerShares Active Mega Cap Fund is an actively managed ETF that seeks to outperform the benchmark Russell Top 200[®] Index and manage risk in the domestic mega-cap market.

With any active management strategy, the expertise of the investment teams and the quality of their investment process is of the utmost importance. Invesco PowerShares is uniquely positioned in the ETF industry by being part of Invesco Ltd., a global independent investment management firm with more than 500 investment professionals across distinct investment centers around the world.

Invesco's Quantitative Strategies investment team manages the portfolio of the PowerShares Active Mega Cap Fund. This group has been managing assets since 1984, and has offices in New York, Boston and Frankfurt. It seeks to capture alpha through systematic application of key financial indicators and behavioral concepts, active risk control and low transaction costs.

The Fund's investment objective is long-term growth of capital.

Unlike Index-based ETFs, the Fund is not an index fund. Therefore, the Fund does not necessarily seek to replicate the performance of a specified index.

The Fund is subject to management risk because it is an actively managed portfolio.

There can be no guarantee that the investment techniques and risk analyses used by the Subadviser or portfolio managers will produce the desired results.

Performance data quoted represents past performance. As stated in the Fund's prospectus, the expense ratio of 0.75% is expressed as a unitary fee to cover expenses incurred in connection with managing the portfolio. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See invescopowershares.com to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times.

³ The Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.

Volatility is the annualized standard deviation of monthly index returns.

Beta is a measure of relative risk and the slope of regression.

Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance.

Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude.

Alpha is a measure of performance on a risk-adjusted basis.

Stock Price-to-Earnings Ratio is the share price divided by earnings per share. It is measured on a 12-month trailing basis.

Stock Price-to-Book-Value Ratio is the ratio of a stock's market price to a company's net asset value.

Weighted Harmonic Average is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones.

Weighted Average Return on Equity is net income divided by net worth.

Weighted Market Capitalization is the sum of each underlying securities' market value.

⁴ Please see the website for complete holdings information. Holdings are subject to change.

Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the shares will trade at premiums or discounts to NAV, which is the market value of a fund share.

The Fund may use enhanced investment techniques such as leveraging and derivatives. Leveraging entails risks such as magnifying changes in the value of the portfolio's securities. The use of leverage may cause a fund to adversely liquidate portfolio positions.

Derivatives are subject to counterparty risk – the risk that the other party will not complete the transaction with the fund. The value of derivatives may rise or fall more rapidly than other investments. For some derivatives, it is possible to lose more than the amount invested in the derivative.

The Fund is nondiversified, which increases the risk that the value of the Fund's shares may vary more widely, and the Fund may be subject to greater investment and credit risk than if it invested more broadly.
