## Fund Description

The PowerShares Dynamic Technology Sector Portfolio is based on the Dynamic Technology Sector Intellidex. The Fund will normally invest at least 90% of its total assets in common stocks that comprise the Index. The Intellidex thoroughly evaluates companies based on a variety of investment merit criteria, including fundamental growth, stock valuation, investment timeliness and risk factors. Securities shown to possess the greatest capital appreciation potential are selected by the Index.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. Concentrated industry investments involve greater risks than more diversified investments.

Performance data quoted represents past performance. As stated in the Fund's prospectus, the gross annual fund operating expense ratio was 0.89%. However, the Adviser has contractually agreed to waive fees and/or pay certain Fund expenses which resulted in a lower fee actually paid by investors. These waivers and reimbursement contracts are reviewed by the Board annually and extend through at least Aug. 30, 2010. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. The Shares' performance reflects fee waivers, absent which performance would have been lower. See [invescopowershares.com](http://invescopowershares.com) to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times.

Underlying Index performance does not represent Fund performance.

<sup>3</sup> The Intraday NAV is a symbol representing estimated fair value based on the most recent intraday price of underlying assets.

Volatility is the annualized standard deviation of monthly index returns.

Beta is a measure of relative risk and the slope of regression.

Sharpe Ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance.

Correlation indicates the degree to which two investments have historically moved in the same direction and magnitude.

Alpha is a measure of performance on a risk-adjusted basis.

Stock Price-to-Earnings Ratio is the share price divided by earnings per share. It is measured on a 12-month trailing basis.

Stock Price-to-Book-Value Ratio is the ratio of a stock's market price to a company's net asset value.

Weighted Harmonic Average is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small ones.

Weighted Average Return on Equity is net income divided by net worth.

Weighted Market Capitalization is the sum of each underlying securities' market value.

<sup>4</sup> Please see the website for complete holdings information. Holdings are subject to change.

<sup>5</sup> The weighted costs excluded from the expense cap include: legal fees pertaining to the Fund's shares offered for sale, SEC and state registration fees, initial fees paid to be listed on an exchange and sublicensing fees. The expense cap is not representative of the total expenses the investor may pay. Please refer to the prospectus for a complete fee schedule.

Shares are subject to risks including: Small and Medium-Sized Company Risk – investing in securities of small and medium-sized companies involves greater risk than is customarily associated with investing in more established companies.

**The Fund is concentrated in a single industry, which involves substantially greater risk of loss and price fluctuations than an investment diversified across multiple industries or sector segments.**
