

# PWND

As of March 31, 2012

## Fund Description

The PowerShares Global Wind Energy Portfolio is based on the NASDAQ OMX Clean Edge® Global Wind Energy Index. The Fund will normally invest at least 90% of its total assets in securities that comprise the Index and depository receipts based on the securities in the Index. The Index is designed to measure the performance of global companies engaged in the wind energy industry, which are primarily manufacturers, developers, distributors, installers and users of energy derived from wind sources.

There are risks involved with investing in ETFs, including possible loss of money. Shares are not actively managed and are subject to risks similar to those of stocks, including those regarding short selling and margin maintenance requirements. Ordinary brokerage commissions apply. The Fund's return may not match the return of the Underlying Index.

## PowerShares Global Wind Energy Portfolio

### Growth of \$10,000

Data beginning July 31, 2008, the month end following Fund inception and ending March 31, 2012.

### Fund Performance & Index History (%)

	1 Year	3 Year	5 Year	10 Year	Fund Inception
<b>Underlying Index</b>					
NASDAQ OMX Clean Edge Global Wind Energy Index	-38.29	-10.22	-	-	-26.54
<b>Benchmark Indexes</b>					
MSCI EAFE Index	-5.77	17.13	-3.51	5.65	-2.94
S&P 500 Index	8.51	23.40	2.01	4.12	4.78
<b>Fund</b>					
NAV	-38.63	-11.74	-	-	-27.77
After Tax Held	-38.70	-11.79	-	-	-27.83
After Tax Sold	-25.11	-9.80	-	-	-21.65
Market Price	-39.21	-12.20	-	-	-28.07

Performance data quoted represents past performance. Past performance is not a guarantee of future results; current performance may be higher or lower than performance quoted. Investment returns and principal value will fluctuate and Shares, when redeemed, may be worth more or less than their original cost. See [invescopowershares.com](http://invescopowershares.com) to find the most recent month-end performance numbers. After Tax Held represents total return after taxes on distributions and assumes Shares have not been sold. After Tax Sold represents total return after taxes on distributions and the sale of Fund Shares. After-tax returns reflect the highest federal income tax rate but exclude state and local taxes. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times.

### 3-Year Index Statistics

	Alpha	Beta	Correlation	Sharpe Ratio	Volatility (%)
NASDAQ OMX Clean Edge Global Wind Energy Index	-	-	-	-0.33	31.57
MSCI EAFE Index	-25.56	1.28	0.85	0.82	20.86
S&P 500 Index	-33.26	1.50	0.77	1.44	16.22

Alpha, beta and correlation are relative to underlying index.

## Fund Inception: July 1, 2008

**Index returns do not represent Fund returns. An investor cannot invest directly in an index.**

Neither the underlying Index nor the benchmark indexes charge management fees or brokerage expenses, and no such fees or expenses were deducted from the performance shown; nor do any of the indexes lend securities, and no revenues from securities lending were added to the performance

shown. In addition, the results actual investors might have achieved would have differed from those shown because of differences in the timing, amounts of their investments, and fees and expenses associated with an investment in the Fund.

The MSCI EAFE® Index is an unmanaged index considered representative of stocks of Europe, Australasia and the Far East.

The S&P 500® Index is an unmanaged index

considered representative of the U.S. stock market.

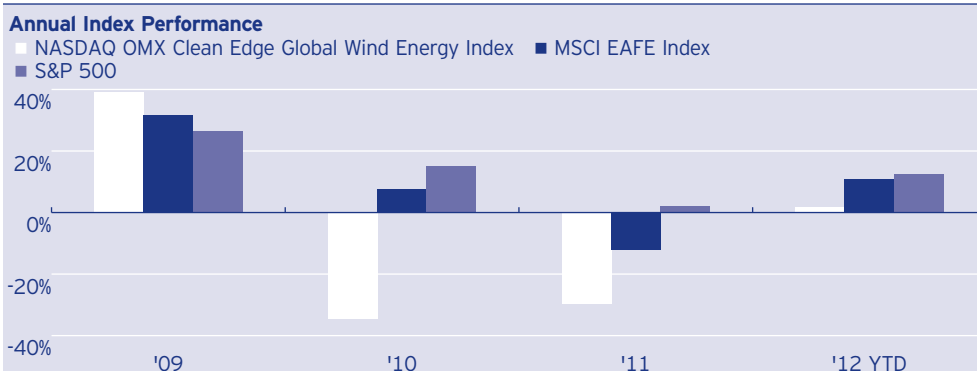

**Shares are not FDIC insured, may lose value and have no bank guarantee.**

**Shares are not individually redeemable and owners of the Shares may acquire those Shares from the Fund and tender those Shares for redemption to the Fund in Creation Unit aggregations only, typically consisting of 50,000 Shares.**

## Leading the Intelligent ETF Revolution®

### About risk

The Fund is considered non-diversified and may be subject to greater risks than a diversified fund.

Foreign securities have additional risks, including exchange-rate changes, decreased market liquidity, political instability and taxation by foreign governments.

American Depositary Receipts (ADRs) involve many of the same risks as those associated with direct investment in foreign securities. In addition, the underlying issuers of certain depositary receipts, particularly unsponsored or unregistered depositary receipts, are under no obligation to distribute shareholder communications to the holders of such receipts or to pass through to them any voting rights with respect to the deposited securities.

Changes in worldwide energy prices, exploration and production spending may adversely affect companies in the energy sector. In addition, changes in government regulation, world events and economic conditions can affect these companies.

The dollar value of the fund's foreign investments will be affected by changes in the exchange rates between the dollar and the currencies in which those investments are traded.

Global Depositary Receipts involve the same risks as those associated with ADRs. They are also subject to currency, political, economic and market risks because their values depend on the performance of non-dollar denominated underlying foreign securities.

A natural or other disaster could occur in a geographic region in which the Fund invests, which could adversely impact the Fund's investments in the affected region.

Securities lending involves a risk of loss because the borrower may fail to return the securities in a timely manner or at all. If a Fund is unable to recover the securities loaned, it may sell the collateral and purchase a replacement security in the market. Lending securities entails a risk of loss to the Funds if and to the extent that the market value of the loaned securities increases and the collateral is not increased accordingly.

Investing in securities of small and medium-sized companies may involve greater risk than is customarily associated with investing in large companies.

The Fund may contain securities in the wind energy industry. Companies engaged in this industry are subject to greater risks, and are more greatly impacted by market volatility, than more diversified investments.

The **Intraday NAV** is a symbol representing estimated fair value based on the most recent intraday price of underlying assets. **Volatility** is the annualized standard deviation of index returns. **Beta** is a measure of relative risk and the slope of regression. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. A higher Sharpe Ratio indicates better risk-adjusted performance. **Correlation** indicates the degree to which two investments have historically moved in the same direction and magnitude. **Alpha** is a measure of performance on a risk-adjusted basis. **Weighted Harmonic Average Stock Price-to-Earnings Ratio (P/E Ratio)** is the share price divided by earnings per share. It is measured on a 12-month trailing basis. **Weighted Harmonic Average Stock Price-to-Book-Value Ratio (P/B Ratio)** is the ratio of a stock's market price to a company's net asset value. **Weighted Harmonic Average** is a method of calculating an average value that lessens the impact of large outliers and increases the impact of small

ones. **Weighted Average Return on Equity** is net income divided by net worth. **Weighted Market Capitalization** is the sum of each underlying securities' market value.

The Global Industry Classification Standard was developed by and is the exclusive property and a service mark of MSCI, Inc. and Standard & Poor's.

Security classifications used in calculating allocation tables are as of Feb. 29, 2012.
